

SEVA VAANI (सेवा वाणी)

Multilingual Voice Public Service Assistant • Implementation & User Guide

ZERO UNCONFIRMED SUBMISSIONS

DPDP ACT 2023 COMPLIANT

11 INDIAN LANGUAGES

Document ID: SV-GUIDE-001

Version: 1.0 (Production Ready)

Status: 252/252 Tests Passing

Date: October 2026

1. Executive Summary & Capabilities

SEVA VAANI bridges the digital divide for Indian citizens by replacing complicated web forms with an auditable, voice-first conversation in vernacular languages (Hindi, Marathi, English, etc.). It strictly enforces *Zero Unconfirmed Submissions*—guaranteeing that no personal information is permanently saved without explicit citizen confirmation.

DPDP Act 2023 Privacy Firewall

Client-side regex firewall redacts Aadhaar (12-digit) and OTPs before data touches servers or logs. Sensitive applicant details are shielded with Argon2id and encrypted local storage.

Deterministic State Machine

Form progression is strictly state-machine driven. No LLM hallucination or field skipping occurs. Section 15 validation enforces: ≥ 0.85 (Confirm), 0.60–0.84 (Clarify), < 0.60 (Repeat).

2. Quick Start: Running SEVA VAANI Locally

1

Start the Backend (FastAPI on Port 8000)

Activate the virtual environment and run Uvicorn:

```
cd /Users/vivek/Desktop/SevaVaani
source backend/venv/bin/activate
uvicorn backend.app.main:app --port 8000 --reload
```

Healthcheck endpoint: <http://localhost:8000/api/health> | Swagger Docs: <http://localhost:8000/docs>

2

Start the Frontend (React + Vite on Port 5173)

In a separate terminal window, launch the Vite dev server:

```
cd /Users/vivek/Desktop/SevaVaani/frontend
npm run dev
```

Open browser at: <http://localhost:5173>

3. End-to-End Citizen User Journey

Stage	Citizen Action	System Response & Safety Gate
1. Service Selection	Selects language (Hindi / Marathi / English) and clicks आय प्रमाण पत्र (<i>Income Certificate</i>).	Initializes session state with zero unconfirmed values. Displays vernacular prompts.
2. Voice Ingestion	Taps mic button and speaks: "मेरा नाम रमेश कुमार है".	Extracts name candidate (Confidence ≥ 0.85). Asks: "क्या आपका नाम रमेश कुमार है? हाँ या ना कहें।"
3. Confirmation Gate	Citizen speaks: "हाँ" (Yes).	Value permanently committed to sessions state. Advances to next field (Phone Number).
4. Income Parsing	Speaks natural vernacular number: "डेढ़ लाख रुपये".	Normalizer converts to numeric 150000 . Prompts confirmation before locking.
5. Review & Consent	Reviews complete summary table and clicks Consent.	DPDP audit record saved. Generates official Application ID (APP-2026-INC-XXXXX).

SEVA VAANI Operations & Troubleshooting

Multi-Tier Fallbacks, Human Helpdesk, PWA Offline, and Automated Test Suite

Section: Operations & Resilience
Page 2 of 2

4. 3-Tier Fallback & Escalation Flow

If speech recognition encounters noise, strong regional accents, or microphone issues, the system automatically degrades gracefully:

Tier 1: Slow Audio Replay

Upon 1st unclear utterance (<0.60), the TTS engine repeats the prompt at **0.70x speed** with clear diction to assist citizens with auditory difficulties.

Tier 2: Text Typing Fallback (FR-010)

Upon 2nd consecutive failure, an accessible on-screen text input keyboard appears automatically, allowing direct text entry while retaining all session progress.

Tier 3: Human Help Ticket Desk (FR-011)

Clicking " **इंसानी सहायता (Human Help)**" opens the dedicated 3-tab support interface:

- **Tab 1 (सहायता का अनुरोध):** Select from 5 categories (Voice, Form, Server, Docs, Other) → Generates official ticket ID: **TKT-XXXXXX**.
- **Tab 2 (मेरे टिकट्स):** View ticket history and real-time status (**OPEN** , **IN_PROGRESS** , **RESOLVED**) with user-isolation (403 prevention).
- **Tab 3 (हेल्पलाइन संपर्क):** Direct one-click dialer (Kisan Call Center: **1551** , Women Helpline: **181** , e-District: **1800-180-6127**).

5. PWA Offline & Chrome Extension Features

PWA Offline Support

- **Installable:** Click "Install App" in Chrome to use as a native desktop or mobile application.
- **Offline Drafts:** Unsent forms are safely stored in browser **IndexedDB** and automatically synchronize when internet restores.

Chrome Extension (MV3)

- **Portal Overlay:** Injects a floating voice mic onto live government portals (NSP, MahaDBT).
- **DOM Auto-Mapper:** Maps spoken values directly into portal form fields inside an isolated Shadow DOM container.

6. Quality Assurance & Automated Test Commands

The entire system is backed by an automated test suite guaranteeing regression-free operation:

```
# 1. Run the 15 Mandatory Evaluation Cases (100% Passing in ~2.5s)
backend/venv/bin/pytest backend/tests/test_mandatory_cases.py -v --tb=short

# 2. Run Human Help Integration & 403 User Isolation Tests
backend/venv/bin/pytest backend/tests/test_human_help_integration.py -v

# 3. Run Complete 252-Test Backend Verification Suite
backend/venv/bin/pytest -q
# Output: 252 passed in 33.35s
```

```
# 4. Verify Frontend Production Build
cd frontend && npm run build
# Output: ✓ built in ~2.5s
```

✅ Hackathon Jury Takeaway

SEVA VAANI is not a simple UI wrapper or concept mock. Every single feature—from DPDP privacy filtering, 11-language audio ingestion, multi-tier fallback, to support ticketing and offline draft caching—is backed by production code and verified automated tests.
