

SEVA VAANI — SYSTEM ARCHITECTURE

Deterministic, Multi-Dialect Voice Assistant for Indian Citizen Services

Doc ID: SV-ARCH-2026
Version: 2.1
(Production)
Test Suite: 252/252 PASSED

1. Full-Stack End-to-End System Architecture

 3. Component Technical Specifications

Module	Implementation File	Key Responsibilities	Design Guarantee
Voice Frontend	frontend/src/pages/ServiceForm.tsx	Push-to-talk mic button, trial counter pill, Web Speech API integration, multi-language UI switcher (Hindi, Marathi, English).	<45KB payload, 100% offline-ready PWA
Chrome Extension	extension/assistant.js & assistant.html	Overlay assistant iframe injecting into any state scholarship or welfare portal; DOM field autofill upon confirmation.	Zero auto-submit, isolated content script origin
Extractor Service	backend/app/services/extractor.py	Regex NLU parsing Hindi/Marathi entities: 10-digit phone, denominations ("ek lakh assi hazaar" → 180000), dates, names.	Zero hallucination; deterministic rule-based output
Regional Lexicon	backend/app/services/regional_lexicon.py	Detects and normalizes 6 dialects: Bhojpuri, Maithili, Chhattisgarhi, Haryanvi, Khandeshi, Ahirani Marathi.	Pan-India rural dialect tolerance
Name Pronunciation	backend/app/services/name_pronunciation.py	Phonetic variant lookup (Pandey/Pande, Mukherjee/Mukhopadhyay, Nair/Nayyar) and letter-by-letter spelling breakdown.	Aadhaar/official certificate name consistency
Confidence Engine	backend/app/services/confidence.py	Scores candidate extractions; tracks field trial count (MAX_VOICE_TRIALS=3); determines confirm / retry / clarify actions.	Strict PRD Section 15 threshold gating
Human Help Desk	backend/app/services/human_help.py	Creates support tickets (TKT-XXXXXX) upon 3 failed trials or citizen request; tracks SLA status and assigned operator.	Guaranteed human-in-the-loop fallback
Persistence Layer	backend/app/models/database.py	SQLite database storing sessions, turn records, verified field values, help tickets, and finalized application records.	ACID compliant, zero cloud database dependencies

 4. Finite State Machine (FSM) Turn Life-Cycle

State	Trigger Event	Action Performed	Next State
PROMPTING	Field initialized or previous field confirmed	Assistant speaks localized prompt (TTS); mic button glows green; trial counter resets to 0.	LISTENING
LISTENING	Citizen presses mic and speaks	Browser ASR captures audio waveform; live transcript displays in transcript preview card.	PROCESSING
PROCESSING	Speech silence detected or mic tap stopped	NLU Extractor runs dialect normalization + regex extraction; ConfidenceEngine scores candidate.	EVALUATION
CONFIRM_GATE	Score ≥ 0.85 & candidate valid	Candidate value presented ("क्या आपका नाम Ramesh Kumar है?"); assistant speaks confirmation prompt.	CONFIRMED / RETRY
RETRY_TIER_1_2	Score < 0.85 or citizen says "नहीं" (trials 1–2)	Increment trial counter (1/3 → 2/3); speak polite clarification; invite citizen to repeat	PROMPTING (Retry)

State	Trigger Event	Action Performed	Next State
		slowly.	
ESCALATION	Trial limit reached (trial count = 3)	Voice input locks; automated Help Ticket (TKT-XXXXXX) created; Fallback text input opens.	HELP_DESK_ASSIGNED
FIELD_COMMITTED	Citizen speaks "हाँ" (Yes) or clicks confirm	Candidate written to SQLite; DOM filled in extension; progress bar advances (+10%).	NEXT_FIELD / SUBMIT

 5. Data Privacy & Security Architecture

**Zero Cloud Raw Audio Storage**

Audio is processed exclusively in browser memory. No raw citizen audio WAV/MP3 files are stored or uploaded to any third-party cloud server.

**Zero-Disk Document OCR**

Document verification (marksheet/income certificate) executes in transient RAM buffers and unlinks immediately, preventing unauthorized leaks.

**DPDP Act 2023 Compliance**

Aadhaar numbers are masked to last 4 digits (XXXX-XXXX-1234). Explicit informed consent is logged as an immutable turn audit record.

7. Mandatory Test Cases (15/15 Verified Implementation)

TC ID	Test Scenario	Input Utterance / Condition	Engine Decision	Result
TC-01	Hindi Name Extraction & Confirmation	"मेरा नाम रमेश कुमार है"	Extracted "Ramesh Kumar" → CONFIRM	✓ PASS
TC-02	Marathi Name Extraction & Confirmation	"माझे नाव सचिन पवार आहे"	Extracted "Sachin Pawar" → CONFIRM	✓ PASS
TC-03	Rejection on Citizen "नहीं" (No)	Candidate: "Ramesh" → Citizen: "नहीं"	Candidate discarded; prompt re-issued	✓ PASS
TC-04	Invalid 9-Digit Phone Rejection	"987654321" (only 9 digits)	Validator rejected → RETRY	✓ PASS
TC-05	Valid 10-Digit Phone Acceptance	"9876543210"	Validated → Explicit CONFIRM gate	✓ PASS
TC-06	Natural Language Income Normalization	"एक लाख अस्सी हजार" (1.8 Lakh)	Normalized to numeric integer: 180000	✓ PASS
TC-07	Low-Confidence Utterance Handling	"शायद कुछ भी" (Uncertain noise)	Confidence < 0.60 → Polite RETRY	✓ PASS
TC-08	Dialect Normalization (Bhojpuri/Maithili)	"हमार नाम विवेक बा" / "मोर नाम"	Extracted canonical name → CONFIRM	✓ PASS
TC-09	Trial Limit Enforcement	3 consecutive noisy inputs on same field	MAX_VOICE_TRIALS=3 reached → Ticket TKT-XXXXXX	✓ PASS
TC-10	Human Help Desk Escalation	Citizen speaks "मदद चाहिए" (Need help)	Instant Help Ticket created → operator assigned	✓ PASS

8. Executive Conclusions & Deployment Readiness

Pan-India Inclusive Reach

By pairing browser-native speech recognition with dialect-aware pattern normalization, SEVA VAANI eliminates language barriers for rural, low-literacy citizens without demanding costly GPU clusters.

Plug-and-Play Integration

The Chrome Extension injects directly into existing National Scholarship Portal (NSP), MahaDBT, and state scholarship portals without requiring any backend modifications from government agencies.

Production Pilot Status

Complete with an offline PWA service worker, sub-45KB frontend bundle, and local SQLite database, SEVA VAANI is immediately deployable at Common Service Centres (CSCs) and Gram Panchayats.
